OVH Digital Launch Pad

The Startup Accelerator
from Innovation to Market

Infrastructure   Support   Visibility
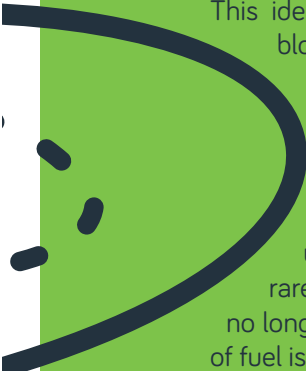

OVH

20 datacenters
on 4 continents

260,000
physical servers

US$1.5 Billion invested
(2015-2020)

Entrepreneurs, our modern day heroes, are on a mission. And under pressure. Indeed, having a good idea is no longer enough. This idea must be nurtured, and then made a reality before it blossoms elsewhere.

Both rocket designers and business angels know that the launch is a crucial step. The relative position of the Earth and the intended planet must be taken into account so as not to miss the target. And the very first minutes are decisive, as above 50 miles, the atmosphere is so rarefied that aerodynamic pressure is close to zero. There is no longer any constraint on thrust direction. Smart management of fuel is what matters, as the funds and talent are keys to success.

It is to help startups that OVH created the Digital Launch Pad. The program supports young innovative companies, from launching to putting their product into orbit. More than 500 companies have already joined the program worldwide! Ready for take-off? Join us!

Market

Custom Architecture,
With you every step
of the way,
Increased Visibility

We offer you support that meets your needs, regardless of the maturity level of your project:

- Up to US$100,000 to spend on our services (Public and Private Cloud, PaaS solutions for connected devices, Game and GPU dedicated servers, healthcare data hosting)

- Technical support to help you choose your infrastructure with solution architects

- Visibility of your project with our community of one million customers (articles, speeches during our events, webinars, etc.)

- Support in your fundraising efforts (assistance and connection with our financial partners)

- Conduct of strategic marketing studies

- Co-working spaces in North America and Europe

Freedom and transparency

"Innovation is freedom" is OVH's philosophy. Therefore, the technologies we provide to host your projects are fully reversible: you remain in control of your data, at any time. And our prices are public and transparent—you won't experience any unpleasant surprises once you've used up the budget available to you at OVH!

Performance and security

OVH offers access to the latest and most efficient technologies, whether Public or Private Cloud. All our solutions benefit from our anti-DDoS protection. And, because privacy of your users' data is a matter of vital importance, you can choose the geographical location of your infrastructure (Europe, North America, Asia-Pacific for now, and more regions soon).

Proximity and support

Providing infrastructure helps reduce time-to-market for solutions developed by startups. But this is not enough: you need support. This is why our experts can help you at each step of your expansion: choice of a scalable and technical architecture, cost optimization, visibility of your project, fundraising…
